

We claim:

1. Female connectors for use with a genderless construction system wherein said female connector is comprised of two holes adapted to mate with a two-fingered genderless connector by means of an interference fit when the fingers are inserted into the holes.

2. The female connector as claimed in Claim 1 in which the holes are not distinct from each other.

3. A hollow block for use with a genderless construction system, said block including a top and a hollow bottom and including a plurality of bosses formed on said top and in said hollow bottom such that when said blocks are placed on top of each other they connect to each other, said bottom bosses being furnished with connectors that allow rods or similar devices to be connected by means of said connectors.
